

SUMMARY

Full-stack Engineer with 2 years experience building production-grade systems using Node.js, AWS (EC2, RDS, S3, CloudWatch), and Redis backed by deep learning experience from a defense research internship at DRDO. Solved 200+ DSA problems across LeetCode/GFG and contributed to open-source projects.

EDUCATION

BML MUNJAL UNIVERSITY

B.Tech in Computer Science (CGPA: 8.1 / 10)

Gurgaon, Haryana

2020 – 2024

EXPERIENCE

EVANDER DIGITAL MARKETING

Bangalore

Full Stack Software Engineer

Apr 2026 - Present

- Led a team of engineers building an employee attendance platform from scratch (MERN stack), owning architecture, sprint delivery and PR reviews; independently gathered requirements and managed deliverables for 3+ client projects.
- Built selfie-based face verification using face-api.js (TensorFlow.js) for real-time facial detection and embedding comparison, achieving 84% match accuracy and eliminating proxy attendance.
- Used Redis for session/auth management, caching attendance and location data and rate-limiting APIs, architected role-based portals (HR/Manager/Super Admin) with leave management workflows.

STUDYIX

Hyderabad

SDE-I

Mar 2025 - Jan 2026

- Built and deployed REST APIs for real-time quiz evaluation using Node.js and MySQL on AWS (EC2, RDS, S3), handling 150+ concurrent users; improved system scalability by introducing async processing and optimized request handling.
- Implemented Redis caching for frequently accessed quiz data, reducing database queries by ~40% and lowering API latency under peak traffic. Optimized MySQL queries using indexing and query restructuring, reducing query execution time.
- Reviewed 50+ pull requests, diagnosed and resolved production bugs and maintained consistent coding standards.

VASI GATEWAYS PVT. LTD.

Noida

Web Developer

Mar 2024 - Oct 2024

- Led development of a role-based college management system, streamlined workflows across admin, faculty, and students by automating role-based operations.
- Designed and integrated secure REST APIs + frontend (React.js), enabling seamless data flow across modules.
- Optimized database structure through normalization and query improvements, reducing inconsistencies and improving data reliability.

DRDO

Hyderabad

Machine Learning Intern

Dec 2022 - Feb 2023

- Built a deep learning model to classify radar signals, improving detection accuracy by 40%.
- Developed a CNN-based model achieving > 90% accuracy in distinguishing real vs false aerial targets.

PROJECTS

Real-time Chat & Notification System | Node.js, Socket.io, Redis, Docker, Nginx

[\[LINK \]](#)

- Architected a horizontally scalable chat/notification system handling concurrent WebSocket connections across multiple backend server instances using Node.js and Socket.io.
- Solved cross-server message delivery using Redis Pub/Sub as the messaging backbone, enabling seamless communication between users connected to different servers; load-balanced 3 instances via Nginx and Docker Compose.
- Built presence tracking (online/offline status) with Redis TTL-based heartbeats

SKILLS

React.js, Next.js, Redux, Node.js, Express, REST APIs, Tailwind CSS, MongoDB, MySQL, PostgreSQL, Redis, JavaScript (ES6+), TypeScript, SQL, Java, Python, AWS (EC2, RDS, S3, IAM, CloudWatch), Nginx, Docker, Git, GitHub, Jest, Postman.
